The WYN Arcon-IRAF Interface: A User's Guide

Dave Silva, Diane Kennedy, Phil Massey, and Tuf Armandroff
Guide Beta Version 2.0, 2 August 1995 (IDS)
Paul Knezek 7/15 – 7 September 1995

Please send comments and corrections to Dave Silva (dsilva@noao.edu) for incorporation in next version

1.0 Introduction

This guide is meant to be the IRAF how-to manual for the **Mosaic** and **Arcon** CCD controllers, installed on the WIYN 0.9-meter telescope. It is assumed that the user is familiar with the basic operation of the WIYN 0.9-meter telescope and the Arcon/Mosaic CCD controllers (see the WIYN 0.9-meter Observer's Manual). It is also assumed that the user is familiar with the basic operation of IRAF (see the IRAF Beginner's Guide).

The Arcon and Mosaic controllers are identical except that the Mosaic controller has a shutter and the Arcon controller does not. Both controllers can read out and store the entire chip, but only the Mosaic controller can read out and store the data for one sector. The Arcon CCD is a 2048 x 2048 chip.

The Arcon controller is used for the 2-amplifier CCD mosaic and the Mosaic controller is used for the 8-amplifier CCD mosaic.

Questions: The science user's guide to WYN CCD imaging is at WYN-IRAF Book Keeping on Quicksilver.

1.1 Supplementary Documentation

The Mosaic is kept track by following documents online:

- Mosaic Controller Software Design and Operation's Guide (in Greg Wirth's Tex Archive).
- Mosaic Controller Hardware Design and Operation's Guide (in Greg Wirth's Tex Archive). Greg Wirth is the author of both documents.

For more information on WIYN facilities, we suggest the user to see the current Kitt Peak Visitor's Manual by Tom Boroson.

2.0 Taking Data

2.1 The Easy Command You Really Need To Know: obsarc

2.1.1 The WYN Imager

The command **obsarc** executes several commands at once. The science cal file is assigned for all subsequent exposures, but overriding the exposure. No image data is changed. Note that the calib user area is used.

```
cl> obsarc
Exposure type (zero|dark|object|dflat|sflat|focus|test): object
Exposure time (seconds): 300
Object name: NGC 1068
Filter or wheel pos: V
Science cal file: ccd
Observation finished.
```

Warning: if the science cal file is not in the current directory a warning message will be printed and the command will abort.

2.1.2 The WYN Mosaic Imager

The command **obsarc** executes several commands at once. The science cal file is assigned for all subsequent exposures, but overriding the exposure. No image data is changed. Note that the calib user area is used.

```
cl> obsarc
Exposure type (zero|dark|object|dflat|sflat|focus|test): object
Exposure time (seconds): 300
Object name: NGC 1068
Filter or wheel pos: V
Science cal file: ccd
Observation finished.
```

Warning: if the pixel list is not in the current directory a warning message will be printed and the command will abort.

2.2 The WYN Arcon Spectrograph

Arcon spectroscopy is a two-sequence process for the present.

```
# arcmos
# arcsetup
```

Just edit the parameters for the number of exposures (or one might expect that either a single exposure will be taken or that the exposure time will be overridden) and the exposure time.

```
# arcexpose
```

An arcon exposure will be acquired. Now the A.F.O. specs need to be set.

```
# afo
```

Accept or edit the parameters.

```
# arcexpose
```

Acquire a wide exposure of whatever field and A.S.M. suppressing, if CCD, Fe and Cu lamps.

```
# arcsetup
cl> epar (user,calib)/ccd.cl, afo=yes
Exposure time (seconds) (300.): 1200.
List of filters in wheels A, B, C:
(Clear,Clear,Clear,Clear,Clear,Clear)
Filter in wheel A: Plate 2A (see A)
```

Positions, Filters, Exposure

```
(1,2,3,4,5,6,7,8)
(1,2,3,4,5,6,7,8)
(1,2,3,4,5,6,7,8)
```

Filter in wheel B: Plate 2A (see B)

2.3 The Parameter Files

The **obsarc** command has a flexible parameter file, **ccd.cl**, which is kept in the user's login directory. The parameter file is read by the command, and the user is prompted for the exposure time, object name, filter or wheel position, and science cal file name. These parameters are:

- **exptime**: The exposure time in seconds. Default is 300 seconds. Use -1 for bias, -999 for zero, -2 for dark.
- **object**: The object name for the science cal file and FITS header.
- **filter**: The filter or wheel position for the science cal file and FITS header.
- **ccdfile**: The science cal file name. Default is ccd.

Observers will not normally, and perhaps rarely, edit the following parameters:

- **imagetyp**: The image type. Default is object. Use zero for bias, dark for dark, dflat for dome flat, sflat for sky flat, focus for focus, test for test.
- **ccdtype**: The CCD type. Default is ccd.
- **ccdsec**: The CCD section. Default is [*,*] (full frame).
- **ccdsum**: The CCD binning. Default is 1 1.
- **gain**: The CCD gain. Default is 2.3.
- **rdnoise**: The CCD readout noise. Default is 7.0.
- **pixeltyp**: The pixel type. Default is real.
- **numamps**: The number of CCD amplifiers. Default is 2.
- **biassec**: The CCD bias section. Default is [1:50,*].
- **trimsec**: The CCD trim section. Default is [51:2098,*].

Observers will not normally, and perhaps rarely, edit the following parameters:

- **imagetyp**: The image type. Default is object. Use zero for bias, dark for dark, dflat for dome flat, sflat for sky flat, focus for focus, test for test.
- **ccdtype**: The CCD type. Default is ccd.
- **ccdsec**: The CCD section. Default is [*,*] (full frame).
- **ccdsum**: The CCD binning. Default is 1 1.
- **gain**: The CCD gain. Default is 2.3.
- **rdnoise**: The CCD readout noise. Default is 7.0.
- **pixeltyp**: The pixel type. Default is real.
- **numamps**: The number of CCD amplifiers. Default is 2.
- **biassec**: The CCD bias section. Default is [1:50,*].
- **trimsec**: The CCD trim section. Default is [51:2098,*].

2.4 Data Collection For Taking Data

In addition to data to check out specific components (see later on some pieces of such type):

- **bias**: Take ten or more sequences of zero exposures.
- **dflat**: Take one or more sequences of type dome flat.
- **sflat**: Take one or more sequences of type sky flat.
- **dark**: Take one or more sequences of type dark.
- **focus**: Take one or more sequences of type focus.

Images of type bias, flat and dark are taken in order to correct for the instrumental signature. Bias frames are taken to correct for the electronic offset. Dark frames are taken to correct for the dark current. Flat frames are taken to correct for pixel-to-pixel variations in the detector response.

Another useful command is

```
# obsarc
```

obsarc is the name of a separate macro file for the present purposes.

```
# arcsetup
# arcexpose
```

Just edit the parameters for the number of exposures (or one might expect that either a single exposure with the exposure time will be taken or that the exposure time will be overridden).

```
# arcexpose
```

An arcon exposure will be acquired. Now the A.F.O. specs need to be set.

```
# afo
```

Accept or edit the parameters.

```
# arcexpose
```

Acquire a wide exposure of whatever field and A.S.M. suppressing, if CCD, Fe and Cu lamps.

```
# arcsetup
cl> epar (user,calib)/ccd.cl, afo=yes
Exposure time (seconds) (300.): 1200.
List of filters in wheels A, B, C:
(Clear,Clear,Clear,Clear,Clear,Clear)
Filter in wheel A: Plate 2A (see A)
```

Positions, Filters, Exposure

```
(1,2,3,4,5,6,7,8)
(1,2,3,4,5,6,7,8)
(1,2,3,4,5,6,7,8)
```

Filter in wheel B: Plate 2A (see B)

2.5 The Parameter Files

The **obsarc** command has a flexible parameter file, **ccd.cl**, which is kept in the user's login directory. The parameter file is read by the command, and the user is prompted for the exposure time, object name, filter or wheel position, and science cal file name. These parameters are:

- **exptime**: The exposure time in seconds. Default is 300 seconds. Use -1 for bias, -999 for zero, -2 for dark.
- **object**: The object name for the science cal file and FITS header.
- **filter**: The filter or wheel position for the science cal file and FITS header.
- **ccdfile**: The science cal file name. Default is ccd.

Observers will not normally, and perhaps rarely, edit the following parameters:

- **imagetyp**: The image type. Default is object. Use zero for bias, dark for dark, dflat for dome flat, sflat for sky flat, focus for focus, test for test.
- **ccdtype**: The CCD type. Default is ccd.
- **ccdsec**: The CCD section. Default is [*,*] (full frame).
- **ccdsum**: The CCD binning. Default is 1 1.
- **gain**: The CCD gain. Default is 2.3.
- **rdnoise**: The CCD readout noise. Default is 7.0.
- **pixeltyp**: The pixel type. Default is real.
- **numamps**: The number of CCD amplifiers. Default is 2.
- **biassec**: The CCD bias section. Default is [1:50,*].
- **trimsec**: The CCD trim section. Default is [51:2098,*].

2.6 Data Collection For Taking Data

In addition to data to check out specific components (see later on some pieces of such type):

- **bias**: Take ten or more sequences of zero exposures.
- **dflat**: Take one or more sequences of type dome flat.
- **sflat**: Take one or more sequences of type sky flat.
- **dark**: Take one or more sequences of type dark.
- **focus**: Take one or more sequences of type focus.

Images of type bias, flat and dark are taken in order to correct for the instrumental signature. Bias frames are taken to correct for the electronic offset. Dark frames are taken to correct for the dark current. Flat frames are taken to correct for pixel-to-pixel variations in the detector response.

Another useful command is

```
# obsarc
```

obsarc is the name of a separate macro file for the present purposes.

2.7 Starting the Imager

The following procedure can be used to start the imager. Login to the 0.9-meter account. Type **mosaic**. Mosaic should then come up. Type **arcsetup**. Type **arcexpose**.

The following procedure can be used to start the Arcon imager. Login to the 0.9-meter account. Type **arcon**. Arcon should then come up. Type **arcsetup**. Type **arcexpose**.

2.8 Starting the Arcon Spectrograph

Login to the 0.9-meter account. Type **arcon**. Arcon should then come up. Type **arcsetup**. Type **arcexpose**.

2.9 Starting the Mosaic Spectrograph

Login to the 0.9-meter account. Type **mosaic**. Mosaic should then come up. Type **arcsetup**. Type **arcexpose**.

2.10 The Arcon Header Files

The Arcon header files are kept in the directory /data/arcon/headers. The files are:

- **arcon.hdr**: Arcon header for the 2-amplifier CCD mosaic.
- **arcon8.hdr**: Arcon header for the 8-amplifier CCD mosaic.

2.11 The Mosaic Header Files

The Mosaic header files are kept in the directory /data/mosaic/headers. The files are:

- **mosaic.hdr**: Mosaic header for the 2-amplifier CCD mosaic.
- **mosaic8.hdr**: Mosaic header for the 8-amplifier CCD mosaic.

2.12 Arcon Header Keywords

The Arcon header keywords are:

- **OBSERVAT**: The observatory. Default is KPNO.
- **TELESCOP**: The telescope. Default is WIYN.
- **INSTRUME**: The instrument. Default is Arcon.
- **DETECTOR**: The detector. Default is T2KB.
- **OBSERVER**: The observer. Default is Arcon.
- **DATE-OBS**: The date of the observation.
- **UT**: The universal time of the observation.
- **EXPTIME**: The exposure time in seconds.
- **OBJECT**: The object name.
- **IMAGETYP**: The image type.
- **CCDTYPE**: The CCD type.
- **CCDSEC**: The CCD section.
- **CCDSUM**: The CCD binning.
- **GAIN**: The CCD gain.
- **RDNOISE**: The CCD readout noise.
- **PIXELTYP**: The pixel type.
- **NUMAMPS**: The number of CCD amplifiers.
- **BIASSEC**: The CCD bias section.
- **TRIMSEC**: The CCD trim section.
- **FILTER**: The filter or wheel position.
- **AIRMASS**: The airmass.
- **RA**: The right ascension of the telescope.
- **DEC**: The declination of the telescope.
- **EPOCH**: The epoch of the telescope.
- **ST**: The sidereal time of the observation.
- **HA**: The hour angle of the observation.
- **ZD**: The zenith distance of the observation.
- **ARCSEC**: The arcseconds per pixel.
- **ROTANGLE**: The rotation angle.
- **FOCUS**: The focus.
- **TEMP**: The temperature.
- **PRESSURE**: The pressure.
- **HUMIDITY**: The humidity.
- **WINDSPEED**: The wind speed.
- **WINDDIR**: The wind direction.
- **COMMENT**: Comments.

2.13 Mosaic Header Keywords

The Mosaic header keywords are:

- **OBSERVAT**: The observatory. Default is KPNO.
- **TELESCOP**: The telescope. Default is WIYN.
- **INSTRUME**: The instrument. Default is Mosaic.
- **DETECTOR**: The detector. Default is T2KB.
- **OBSERVER**: The observer. Default is Mosaic.
- **DATE-OBS**: The date of the observation.
- **UT**: The universal time of the observation.
- **EXPTIME**: The exposure time in seconds.
- **OBJECT**: The object name.
- **IMAGETYP**: The image type.
- **CCDTYPE**: The CCD type.
- **CCDSEC**: The CCD section.
- **CCDSUM**: The CCD binning.
- **GAIN**: The CCD gain.
- **RDNOISE**: The CCD readout noise.
- **PIXELTYP**: The pixel type.
- **NUMAMPS**: The number of CCD amplifiers.
- **BIASSEC**: The CCD bias section.
- **TRIMSEC**: The CCD trim section.
- **FILTER**: The filter or wheel position.
- **AIRMASS**: The airmass.
- **RA**: The right ascension of the telescope.
- **DEC**: The declination of the telescope.
- **EPOCH**: The epoch of the telescope.
- **ST**: The sidereal time of the observation.
- **HA**: The hour angle of the observation.
- **ZD**: The zenith distance of the observation.
- **ARCSEC**: The arcseconds per pixel.
- **ROTANGLE**: The rotation angle.
- **FOCUS**: The focus.
- **TEMP**: The temperature.
- **PRESSURE**: The pressure.
- **HUMIDITY**: The humidity.
- **WINDSPEED**: The wind speed.
- **WINDDIR**: The wind direction.
- **COMMENT**: Comments.

2.14 Arcon Header Keywords

The Arcon header keywords are:

- **OBSERVAT**: The observatory. Default is KPNO.
- **TELESCOP**: The telescope. Default is WIYN.
- **INSTRUME**: The instrument. Default is Arcon.
- **DETECTOR**: The detector. Default is T2KB.
- **OBSERVER**: The observer. Default is Arcon.
- **DATE-OBS**: The date of the observation.
- **UT**: The universal time of the observation.
- **EXPTIME**: The exposure time in seconds.
- **OBJECT**: The object name.
- **IMAGETYP**: The image type.
- **CCDTYPE**: The CCD type.
- **CCDSEC**: The CCD section.
- **CCDSUM**: The CCD binning.
- **GAIN**: The CCD gain.
- **RDNOISE**: The CCD readout noise.
- **PIXELTYP**: The pixel type.
- **NUMAMPS**: The number of CCD amplifiers.
- **BIASSEC**: The CCD bias section.
- **TRIMSEC**: The CCD trim section.
- **FILTER**: The filter or wheel position.
- **AIRMASS**: The airmass.
- **RA**: The right ascension of the telescope.
- **DEC**: The declination of the telescope.
- **EPOCH**: The epoch of the telescope.
- **ST**: The sidereal time of the observation.
- **HA**: The hour angle of the observation.
- **ZD**: The zenith distance of the observation.
- **ARCSEC**: The arcseconds per pixel.
- **ROTANGLE**: The rotation angle.
- **FOCUS**: The focus.
- **TEMP**: The temperature.
- **PRESSURE**: The pressure.
- **HUMIDITY**: The humidity.
- **WINDSPEED**: The wind speed.
- **WINDDIR**: The wind direction.
- **COMMENT**: Comments.

2.15 Mosaic Header Keywords

The Mosaic header keywords are:

- **OBSERVAT**: The observatory. Default is KPNO.
- **TELESCOP**: The telescope. Default is WIYN.
- **INSTRUME**: The instrument. Default is Mosaic.
- **DETECTOR**: The detector. Default is T2KB.
- **OBSERVER**: The observer. Default is Mosaic.
- **DATE-OBS**: The date of the observation.
- **UT**: The universal time of the observation.
- **EXPTIME**: The exposure time in seconds.
- **OBJECT**: The object name.
- **IMAGETYP**: The image type.
- **CCDTYPE**: The CCD type.
- **CCDSEC**: The CCD section.
- **CCDSUM**: The CCD binning.
- **GAIN**: The CCD gain.
- **RDNOISE**: The CCD readout noise.
- **PIXELTYP**: The pixel type.
- **NUMAMPS**: The number of CCD amplifiers.
- **BIASSEC**: The CCD bias section.
- **TRIMSEC**: The CCD trim section.
- **FILTER**: The filter or wheel position.
- **AIRMASS**: The airmass.
- **RA**: The right ascension of the telescope.
- **DEC**: The declination of the telescope.
- **EPOCH**: The epoch of the telescope.
- **ST**: The sidereal time of the observation.
- **HA**: The hour angle of the observation.
- **ZD**: The zenith distance of the observation.
- **ARCSEC**: The arcseconds per pixel.
- **ROTANGLE**: The rotation angle.
- **FOCUS**: The focus.
- **TEMP**: The temperature.
- **PRESSURE**: The pressure.
- **HUMIDITY**: The humidity.
- **WINDSPEED**: The wind speed.
- **WINDDIR**: The wind direction.
- **COMMENT**: Comments.

2.16 Arcon Header Keywords

The Arcon header keywords are:

- **OBSERVAT**: The observatory. Default is KPNO.
- **TELESCOP**: The telescope. Default is WIYN.
- **INSTRUME**: The instrument. Default is Arcon.
- **DETECTOR**: The detector. Default is T2KB.
- **OBSERVER**: The observer. Default is Arcon.
- **DATE-OBS**: The date of the observation.
- **UT**: The universal time of the observation.
- **EXPTIME**: The exposure time in seconds.
- **OBJECT**: The object name.
- **IMAGETYP**: The image type.
- **CCDTYPE**: The CCD type.
- **CCDSEC**: The CCD section.
- **CCDSUM**: The CCD binning.
- **GAIN**: The CCD gain.
- **RDNOISE**: The CCD readout noise.
- **PIXELTYP**: The pixel type.
- **NUMAMPS**: The number of CCD amplifiers.
- **BIASSEC**: The CCD bias section.
- **TRIMSEC**: The CCD trim section.
- **FILTER**: The filter or wheel position.
- **AIRMASS**: The airmass.
- **RA**: The right ascension of the telescope.
- **DEC**: The declination of the telescope.
- **EPOCH**: The epoch of the telescope.
- **ST**: The sidereal time of the observation.
- **HA**: The hour angle of the observation.
- **ZD**: The zenith distance of the observation.
- **ARCSEC**: The arcseconds per pixel.
- **ROTANGLE**: The rotation angle.
- **FOCUS**: The focus.
- **TEMP**: The temperature.
- **PRESSURE**: The pressure.
- **HUMIDITY**: The humidity.
- **WINDSPEED**: The wind speed.
- **WINDDIR**: The wind direction.
- **COMMENT**: Comments.

2.17 Mosaic Header Keywords

The Mosaic header keywords are:

- **OBSERVAT**: The observatory. Default is KPNO.
- **TELESCOP**: The telescope. Default is WIYN.
- **INSTRUME**: The instrument. Default is Mosaic.
- **DETECTOR**: The detector. Default is T2KB.
- **OBSERVER**: The observer. Default is Mosaic.
- **DATE-OBS**: The date of the observation.
- **UT**: The universal time of the observation.
- **EXPTIME**: The exposure time in seconds.
- **OBJECT**: The object name.
- **IMAGETYP**: The image type.
- **CCDTYPE**: The CCD type.
- **CCDSEC**: The CCD section.
- **CCDSUM**: The CCD binning.
- **GAIN**: The CCD gain.
- **RDNOISE**: The CCD readout noise.
- **PIXELTYP**: The pixel type.
- **NUMAMPS**: The number of CCD amplifiers.
- **BIASSEC**: The CCD bias section.
- **TRIMSEC**: The CCD trim section.
- **FILTER**: The filter or wheel position.
- **AIRMASS**: The airmass.
- **RA**: The right ascension of the telescope.
- **DEC**: The declination of the telescope.
- **EPOCH**: The epoch of the telescope.
- **ST**: The sidereal time of the observation.
- **HA**: The hour angle of the observation.
- **ZD**: The zenith distance of the observation.
- **ARCSEC**: The arcseconds per pixel.
- **ROTANGLE**: The rotation angle.
- **FOCUS**: The focus.
- **TEMP**: The temperature.
- **PRESSURE**: The pressure.
- **HUMIDITY**: The humidity.
- **WINDSPEED**: The wind speed.
- **WINDDIR**: The wind direction.
- **COMMENT**: Comments.

2.18 Arcon Header Keywords

The Arcon header keywords are:

- **OBSERVAT**: The observatory. Default is KPNO.
- **TELESCOP**: The telescope. Default is WIYN.
- **INSTRUME**: The instrument. Default is Arcon.
- **DETECTOR**: The detector. Default is T2KB.
- **OBSERVER**: The observer. Default is Arcon.
- **DATE-OBS**: The date of the observation.
- **UT**: The universal time of the observation.
- **EXPTIME**: The exposure time in seconds.
- **OBJECT**: The object name.
- **IMAGETYP**: The image type.
- **CCDTYPE**: The CCD type.
- **CCDSEC**: The CCD section.
- **CCDSUM**: The CCD binning.
- **GAIN**: The CCD gain.
- **RDNOISE**: The CCD readout noise.
- **PIXELTYP**: The pixel type.
- **NUMAMPS**: The number of CCD amplifiers.
- **BIASSEC**: The CCD bias section.
- **TRIMSEC**: The CCD trim section.
- **FILTER**: The filter or wheel position.
- **AIRMASS**: The airmass.
- **RA**: The right ascension of the telescope.
- **DEC**: The declination of the telescope.
- **EPOCH**: The epoch of the telescope.
- **ST**: The sidereal time of the observation.
- **HA**: The hour angle of the observation.
- **ZD**: The zenith distance of the observation.
- **ARCSEC**: The arcseconds per pixel.
- **ROTANGLE**: The rotation angle.
- **FOCUS**: The focus.
- **TEMP**: The temperature.
- **PRESSURE**: The pressure.
- **HUMIDITY**: The humidity.
- **WINDSPEED**: The wind speed.
- **WINDDIR**: The wind direction.
- **COMMENT**: Comments.

2.19 Mosaic Header Keywords

The Mosaic header keywords are:

- **OBSERVAT**: The observatory. Default is KPNO.
- **TELESCOP**: The telescope. Default is WIYN.
- **INSTRUME**: The instrument. Default is Mosaic.
- **DETECTOR**: The detector. Default is T2KB.
- **OBSERVER**: The observer. Default is Mosaic.
- **DATE-OBS**: The date of the observation.
- **UT**: The universal time of the observation.
- **EXPTIME**: The exposure time in seconds.
- **OBJECT**: The object name.
- **IMAGETYP**: The image type.
- **CCDTYPE**: The CCD type.
- **CCDSEC**: The CCD section.
- **CCDSUM**: The CCD binning.
- **GAIN**: The CCD gain.
- **RDNOISE**: The CCD readout noise.
- **PIXELTYP**: The pixel type.
- **NUMAMPS**: The number of CCD amplifiers.
- **BIASSEC**: The CCD bias section.
- **TRIMSEC**: The CCD trim section.
- **FILTER**: The filter or wheel position.
- **AIRMASS**: The airmass.
- **RA**: The right ascension of the telescope.
- **DEC**: The declination of the telescope.
- **EPOCH**: The epoch of the telescope.
- **ST**: The sidereal time of the observation.
- **HA**: The hour angle of the observation.
- **ZD**: The zenith distance of the observation.
- **ARCSEC**: The arcseconds per pixel.
- **ROTANGLE**: The rotation angle.
- **FOCUS**: The focus.
- **TEMP**: The temperature.
- **PRESSURE**: The pressure.
- **HUMIDITY**: The humidity.
- **WINDSPEED**: The wind speed.
- **WINDDIR**: The wind direction.
- **COMMENT**: Comments.

2.20 Arcon Header Keywords

The Arcon header keywords are:

- **OBSERVAT**: The observatory. Default is KPNO.
- **TELESCOP**: The telescope. Default is WIYN.
- **INSTRUME**: The instrument. Default is Arcon.
- **DETECTOR**: The detector. Default is T2KB.
- **OBSERVER**: The observer. Default is Arcon.
- **DATE-OBS**: The date of the observation.
- **UT**: The universal time of the observation.
- **EXPTIME**: The exposure time in seconds.
- **OBJECT**: The object name.
- **IMAGETYP**: The image type.
- **CCDTYPE**: The CCD type.
- **CCDSEC**: The CCD section.
- **CCDSUM**: The CCD binning.
- **GAIN**: The CCD gain.
- **RDNOISE**: The CCD readout noise.
- **PIXELTYP**: The pixel type.
- **NUMAMPS**: The number of CCD amplifiers.
- **BIASSEC**: The CCD bias section.
- **TRIMSEC**: The CCD trim section.
- **FILTER**: The filter or wheel position.
- **AIRMASS**: The airmass.
- **RA**: The right ascension of the telescope.
- **DEC**: The declination of the telescope.
- **EPOCH**: The epoch of the telescope.
- **ST**: The sidereal time of the observation.
- **HA**: The hour angle of the observation.
- **ZD**: The zenith distance of the observation.
- **ARCSEC**: The arcseconds per pixel.
- **ROTANGLE**: The rotation angle.
- **FOCUS**: The focus.
- **TEMP**: The temperature.
- **PRESSURE**: The pressure.
- **HUMIDITY**: The humidity.
- **WINDSPEED**: The wind speed.
- **WINDDIR**: The wind direction.
- **COMMENT**: Comments.

2.21 Mosaic Header Keywords

The Mosaic header keywords are:

- **OBSERVAT**: The observatory. Default is KPNO.
- **TELESCOP**: The telescope. Default is WIYN.
- **INSTRUME**: The instrument. Default is Mosaic.
- **DETECTOR**: The detector. Default is T2KB.
- **OBSERVER**: The observer. Default is Mosaic.
- **DATE-OBS**: The date of the observation.
- **UT**: The universal time of the observation.
- **EXPTIME**: The exposure time in seconds.
- **OBJECT**: The object name.
- **IMAGETYP**: The image type.
- **CCDTYPE**: The CCD type.
- **CCDSEC**: The CCD section.
- **CCDSUM**: The CCD binning.
- **GAIN**: The CCD gain.
- **RDNOISE**: The CCD readout noise.
- **PIXELTYP**: The pixel type.
- **NUMAMPS**: The number of CCD amplifiers.
- **BIASSEC**: The CCD bias section.
- **TRIMSEC**: The CCD trim section.
- **FILTER**: The filter or wheel position.
- **AIRMASS**: The airmass.
- **RA**: The right ascension of the telescope.
- **DEC**: The declination of the telescope.
- **EPOCH**: The epoch of the telescope.
- **ST**: The sidereal time of the observation.
- **HA**: The hour angle of the observation.
- **ZD**: The zenith distance of the observation.
- **ARCSEC**: The arcseconds per pixel.
- **ROTANGLE**: The rotation angle.
- **FOCUS**: The focus.
- **TEMP**: The temperature.
- **PRESSURE**: The pressure.
- **HUMIDITY**: The humidity.
- **WINDSPEED**: The wind speed.
- **WINDDIR**: The wind direction.
- **COMMENT**: Comments.

2.22 Arcon Header Keywords

The Arcon header keywords are:

- **OBSERVAT**: The observatory. Default is KPNO.
- **TELESCOP**: The telescope. Default is WIYN.
- **INSTRUME**: The instrument. Default is Arcon.
- **DETECTOR**: The detector. Default is T2KB.
- **OBSERVER**: The observer. Default is Arcon.
- **DATE-OBS**: The date of the observation.
- **UT**: The universal time of the observation.
- **EXPTIME**: The exposure time in seconds.
- **OBJECT**: The object name.
- **IMAGETYP**: The image type.
- **CCDTYPE**: The CCD type.
- **CCDSEC**: The CCD section.
- **CCDSUM**: The CCD binning.
- **GAIN**: The CCD gain.
- **RDNOISE**: The CCD readout noise.
- **PIXELTYP**: The pixel type.
- **NUMAMPS**: The number of CCD amplifiers.
- **BIASSEC**: The CCD bias section.
- **TRIMSEC**: The CCD trim section.
- **FILTER**: The filter or wheel position.
- **AIRMASS**: The airmass.
- **RA**: The right ascension of the telescope.
- **DEC**: The declination of the telescope.
- **EPOCH**: The epoch of the telescope.
- **ST**: The sidereal time of the observation.
- **HA**: The hour angle of the observation.
- **ZD**: The zenith distance of the observation.
- **ARCSEC**: The arcseconds per pixel.
- **ROTANGLE**: The rotation angle.
- **FOCUS**: The focus.
- **TEMP**: The temperature.
- **PRESSURE**: The pressure.
- **HUMIDITY**: The humidity.
- **WINDSPEED**: The wind speed.
- **WINDDIR**: The wind direction.
- **COMMENT**: Comments.

2.23 Mosaic Header Keywords

The Mosaic header keywords are:

- **OBSERVAT**: The observatory. Default is KPNO.
- **TELESCOP**: The telescope. Default is WIYN.
- **INSTRUME**: The instrument. Default is Mosaic.
- **DETECTOR**: The detector. Default is T2KB.
- **OBSERVER**: The observer. Default is Mosaic.
- **DATE-OBS**: The date of the observation.
- **UT**: The universal time of the observation.
- **EXPTIME**: The exposure time in seconds.
- **OBJECT**: The object name.
- **IMAGETYP**: The image type.
- **CCDTYPE**: The CCD type.
- **CCDSEC**: The CCD section.
- **CCDSUM**: The CCD binning.
- **GAIN**: The CCD gain.
- **RDNOISE**: The CCD readout noise.
- **PIXELTYP**: The pixel type.
- **NUMAMPS**: The number of CCD amplifiers.
- **BIASSEC**: The CCD bias section.
- **TRIMSEC**: The CCD trim section.
- **FILTER**: The filter or wheel position.
- **AIRMASS**: The airmass.
- **RA**: The right ascension of the telescope.
- **DEC**: The declination of the telescope.
- **EPOCH**: The epoch of the telescope.
- **ST**: The sidereal time of the observation.
- **HA**: The hour angle of the observation.
- **ZD**: The zenith distance of the observation.
- **ARCSEC**: The arcseconds per pixel.
- **ROTANGLE**: The rotation angle.
- **FOCUS**: The focus.
- **TEMP**: The temperature.
- **PRESSURE**: The pressure.
- **HUMIDITY**: The humidity.
- **WINDSPEED**: The wind speed.
- **WINDDIR**: The wind direction.
- **COMMENT**: Comments.

2.24 Arcon Header Keywords

The Arcon header keywords are:

- **OBSERVAT**: The observatory. Default is KPNO.
- **TELESCOP**: The telescope. Default is WIYN.
- **INSTRUME**: The instrument. Default is Arcon.
- **DETECTOR**: The detector. Default is T2KB.
- **OBSERVER**: The observer. Default is Arcon.
- **DATE-OBS**: The date of the observation.
- **UT**: The universal time of the observation.
- **EXPTIME**: The exposure time in seconds.
- **OBJECT**: The object name.
- **IMAGETYP**: The image type.
- **CCDTYPE**: The CCD type.
- **CCDSEC**: The CCD section.
- **CCDSUM**: The CCD binning.
- **GAIN**: The CCD gain.
- **RDNOISE**: The CCD readout noise.
- **PIXELTYP**: The pixel type.
- **NUMAMPS**: The number of CCD amplifiers.
- **BIASSEC**: The CCD bias section.
- **TRIMSEC**: The CCD trim section.
- **FILTER**: The filter or wheel position.
- **AIRMASS**: The airmass.
- **RA**: The right ascension of the telescope.
- **DEC**: The declination of the telescope.
- **EPOCH**: The epoch of the telescope.
- **ST**: The sidereal time of the observation.
- **HA**: The hour angle of the observation.
- **ZD**: The zenith distance of the observation.
- **ARCSEC**: The arcseconds per pixel.
- **ROTANGLE**: The rotation angle.
- **FOCUS**: The focus.
- **TEMP**: The temperature.
- **PRESSURE**: The pressure.
- **HUMIDITY**: The humidity.
- **WINDSPEED**: The wind speed.
- **WINDDIR**: The wind direction.
- **COMMENT**: Comments.

2.25 Mosaic Header Keywords

The Mosaic header keywords are:

- **OBSERVAT**: The observatory. Default is KPNO.
- **TELESCOP**: The telescope. Default is WIYN.
- **INSTRUME**: The instrument. Default is Mosaic.
- **DETECTOR**: The detector. Default is T2KB.
- **OBSERVER**: The observer. Default is Mosaic.
- **DATE-OBS**: The date of the observation.
- **UT**: The universal time of the observation.
- **EXPTIME**: The exposure time in seconds.
- **OBJECT**: The object name.
- **IMAGETYP**: The image type.
- **CCDTYPE**: The CCD type.
- **CCDSEC**: The CCD section.
- **CCDSUM**: The CCD binning.
- **GAIN**: The CCD gain.
- **RDNOISE**: The CCD readout noise.
- **PIXELTYP**: The pixel type.
- **NUMAMPS**: The number of CCD amplifiers.
- **BIASSEC**: The CCD bias section.
- **TRIMSEC**: The CCD trim section.
- **FILTER**: The filter or wheel position.
- **AIRMASS**: The airmass.
- **RA**: The right ascension of the telescope.
- **DEC**: The declination of the telescope.
- **EPOCH**: The epoch of the telescope.
- **ST**: The sidereal time of the observation.
- **HA**: The hour angle of the observation.
- **ZD**: The zenith distance of the observation.
- **ARCSEC**: The arcseconds per pixel.
- **ROTANGLE**: The rotation angle.
- **FOCUS**: The focus.
- **TEMP**: The temperature.
- **PRESSURE**: The pressure.
- **HUMIDITY**: The humidity.
- **WINDSPEED**: The wind speed.
- **WINDDIR**: The wind direction.
- **COMMENT**: Comments.

2.26 Arcon Header Keywords

The Arcon header keywords are:

- **OBSERVAT**: The observatory. Default is KPNO.
- **TELESCOP**: The telescope. Default is WIYN.
- **INSTRUME**: The instrument. Default is Arcon.
- **DETECTOR**: The detector. Default is T2KB.
- **OBSERVER**: The observer. Default is Arcon.
- **DATE-OBS**: The date of the observation.
- **UT**: The universal time of the observation.
- **EXPTIME**: The exposure time in seconds.
- **OBJECT**: The object name.
- **IMAGETYP**: The image type.
- **CCDTYPE**: The CCD type.
- **CCDSEC**: The CCD section.
- **CCDSUM**: The CCD binning.
- **GAIN**: The CCD gain.
- **RDNOISE**: The CCD readout noise.
- **PIXELTYP**: The pixel type.
- **NUMAMPS**: The number of CCD amplifiers.
- **BIASSEC**: The CCD bias section.
- **TRIMSEC**: The CCD trim section.
- **FILTER**: The filter or wheel position.
- **AIRMASS**: The airmass.
- **RA**: The right ascension of the telescope.
- **DEC**: The declination of the telescope.
- **EPOCH**: The epoch of the telescope.
- **ST**: The sidereal time of the observation.
- **HA**: The hour angle of the observation.
- **ZD**: The zenith distance of the observation.
- **ARCSEC**: The arcseconds per pixel.
- **ROTANGLE**: The rotation angle.
- **FOCUS**: The focus.
- **TEMP**: The temperature.
- **PRESSURE**: The pressure.
- **HUMIDITY**: The humidity.
- **WINDSPEED**: The wind speed.
- **WINDDIR**: The wind direction.
- **COMMENT**: Comments.

2.27 Mosaic Header Keywords

The Mosaic header keywords are:

- **OBSERVAT**: The observatory. Default is KPNO.
- **TELESCOP**: The telescope. Default is WIYN.
- **INSTRUME**: The instrument. Default is Mosaic.
- **DETECTOR**: The detector. Default is T2KB.
- **OBSERVER**: The observer. Default is Mosaic.
- **DATE-OBS**: The date of the observation.
- **UT**: The universal time of the observation.
- **EXPTIME**: The exposure time in seconds.
- **OBJECT**: The object name.
- **IMAGETYP**: The image type.
- **CCDTYPE**: The CCD type.
- **CCDSEC**: The CCD section.
- **CCDSUM**: The CCD binning.
- **GAIN**: The CCD gain.
- **RDNOISE**: The CCD readout noise.
- **PIXELTYP**: The pixel type.
- **NUMAMPS**: The number of CCD amplifiers.
- **BIASSEC**: The CCD bias section.
- **TRIMSEC**: The CCD trim section.
- **FILTER**: The filter or wheel position.
- **AIRMASS**: The airmass.
- **RA**: The right ascension of the telescope.
- **DEC**: The declination of the telescope.
- **EPOCH**: The epoch of the telescope.
- **ST**: The sidereal time of the observation.
- **HA**: The hour angle of the observation.
- **ZD**: The zenith distance of the observation.
- **ARCSEC**: The arcseconds per pixel.
- **ROTANGLE**: The rotation angle.
- **FOCUS**: The focus.
- **TEMP**: The temperature.
- **PRESSURE**: The pressure.
- **HUMIDITY**: The humidity.
- **WINDSPEED**: The wind speed.
- **WINDDIR**: The wind direction.
- **COMMENT**: Comments.

2.28 Arcon Header Keywords

The Arcon header keywords are:

- **OBSERVAT**: The observatory. Default is KPNO.
- **TELESCOP**: The telescope. Default is WIYN.
- **INSTRUME**: The instrument. Default is Arcon.
- **DETECTOR**: The detector. Default is T2KB.
- **OBSERVER**: The observer. Default is Arcon.
- **DATE-OBS**: The date of the observation.
- **UT**: The universal time of the observation.
- **EXPTIME**: The exposure time in seconds.
- **OBJECT**: The object name.
- **IMAGETYP**: The image type.
- **C

A quickstart & cheat sheet by Antonomasia

Antonomasia's notes at antonomasia@ntlworld.com Please report errors; corrections welcome; will credit.

Appendix A: What to do if things go wrong

A.1. Exit in a normal way

If you have enjoyed the game to extinction, then you can exit by only moving to downstair or using [#quit](#).

Or you can [#quit](#) at any time.

Or [#save](#).

Or quit "for real-ish". Next time it is on, as above, all is well. If dead you are awarding life

Or [#wizkill](#) [#quit](#).

A.2. Hangup

In this command line is a program that recovers hacked-out-on-the-Wolf-Course saves. Backup first, then run it.

If the help, or if the name remains the stopped functioning, then the problem is probably in [#save](#) itself and so is unfixable. Contact the [Nethack Dev Team](http://www.nethack.org/common/contact.html) and hope for a patch.

~/.nethackrc

```
# Recover from hangup
  #help on the #extcmd menu, ?!for the #save subtree and #!save for
  #the #save itself.

  # from #!'s output:
  #  ?!for the #save subtree and #!save for the #save itself.
  #  ?!Hangup Save and #!save for #save itself.
  #  ?!Save and #!save for #save itself.
  #  ?!Save, Hangup Save and #!save for #save itself.
  #  ?!Hangup Save, Save and #!save for #save itself.
  #
  # ?!, #!, Hangup, Save, #save itself.
  #
  # Hangup Save, Save, #save itself.
  #
  # Hangup Save, Save, #save itself.
  #
  # Hangup Save
```
